

RocketDMS is available in 2 versions:

1. **RocketDMS Lite** - FREEWARE - Fully functional. Download RocketDMS and install on a PC. You can use this to trial RocketDMS and continue to use it for as long as you like.

2. **RocketDMS** - A single user lite system may be upgraded a multi-user system at any time. The upgrade is done by using the included system utilities program to transfer the document store onto a central document server. All else remains the same. In fact, you can do this step with a single user system as well.

The only difference between the Lite and the Full system is:

1. The document store is moved to a separate computer or server.
2. You purchase additional licenses for each simultaneous username.
